

Forge Community platform

The Forge Community platform is a growing, thriving platform that leverages Salesforce Experience Cloud and other proven open source technology solutions.

Learn more about our user-driven security options and our data, network, and application security features that work together for the protection of our members.

User-driven security features

Members have the right to choose what they share about themselves on the platform, how they participate in the community. All member interactions on the platform must meet the Forge Community pledge and standards.

Feature	Description
Member profile	All members of our platform must join with their real legal name and a valid email address for us to support account maintenance. It's the member's choice on what personal information they choose to include on their profile- including any non-platform contact details.
Privacy preferences	We believe in giving single family office members choices in how they participate, and how they are found on the platform. Single family office members can only be seen and found by other members they share a group with. The same is true in reverse- they can only see and find other members they share groups with.
Community moderation	Our community participates actively in content moderation. Members have the right to flag posts for community managers to review, and its members who make the final decisions on that content. All posts in moderation are reviewed by the membership committee.
